

# *Falling Back in Love with our World*

*Scientists say that without decisive action, the ability of the Earth's ecosystems to sustain future generations cannot be taken for granted - a depressing thought! Which is why the work of Evolutionary Cosmologist Brian Swimme is so extraordinary – in spite of the dire situation we are in, his message is irrepressibly optimistic without being in the least bit flakey.*

*Swimme's project has been to take the most cutting-edge discoveries of physics, mathematics, biology and neuroscience, plus an understanding of history and spirituality, and forge from them a new story of the universe that can inspire us to completely change our relationship to our world.*

*To learn more about Swimme's biospirituality, come to samplers of his videoed lectures "Canticle to the Cosmos", which present a revolutionary re-visioning of our place in the universe.*

*Three Wednesdays 12.10-12.55pm*

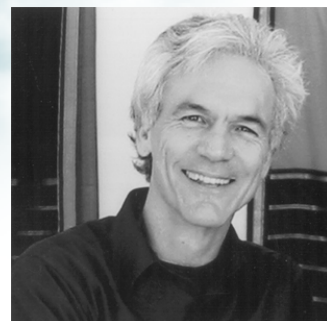

*In Room WB132*

*18 May*

*25 May*

*1 June*

*See [www.brianswimme.org](http://www.brianswimme.org)*
