

We were tasked with fully designing a resort located in Albany, Northshore. We entirely created all the architectural models, structural designs, construction methods, master schedule and finally priced the entire project. The end result we are very proud of and would like to showcase our journey with you.

Our Journey

Final Outcomes

Key Points

- 1** Our meeting schedule for the year and site layout were two of the very first things we did in semester one, our meeting schedule was vital in maintaining a steady flow of deliverables and our first site layout meeting allowed us to spitfire ideas for what we wanted in our resort.
- 2** Above you can see the journey we went through with designing our Chalets and Hotel, we wanted to create an overall theme across each building to create a unique atmosphere that can only be felt in our resort.
- 3** This Hotel facade has been inspired by New Zealand's native wildlife and scenery. The application of greenery around the facade fulfill the client's values of applying sustainability.
- 4** We incorporated the stingray design into this facade to align with our Maori culture and our location being right beside the ocean.
- 5** This is an inside view of our private resort gym, it can house up to 60 people with state of the art equipment open 24/7.
- 6** Whether you prefer swimming inside or outside our pool facility will cater to you. With a capacity of 80 people you can have the luxury of relaxing poolside with all your friends and family.
